

NOW HIRING: SUSTAINMENT/MANUFACTURING ENGINEER

JOIN HOVERFLY: HELP US GROW

Join our team as our new **Sustainment Engineer** and play a key role in ensuring our cutting-edge tether-powered drone systems are manufacturable and sustainable. Your impact will shape the next generation of long-duration, secure aerial solutions that power industries from defense to sports.

Why You Want This Job

- Be part of a mission that revolutionizes surveillance and communication tech
- Work with advanced mechanical and electromechanical systems, shaping how drones operate
- Gain hands-on experience with high-tech processes like cable harnessing and PCB layouts

What You'll Be Doing

- Creating and refining detailed engineering drawings, models, and manufacturing documentation
- Managing vendor relationships to ensure parts meet specification and cost-effectiveness
- Developing and maintaining manufacturing procedures and assembly drawings
- Validating components, inspecting quality, and managing parts for the product lifecycle
- Collaborating across teams to enhance manufacturability and support design improvements

Why You'll Be Successful

- Skilled in electromechanical systems, cable harnesses, and electronics
- Experience working with PDM, PLM, and ERP systems
- Proficient with CAD software and familiar with PCB layouts
- Experience working in machine shops or print shops is a strong advantage
- Excited to travel to vendors and suppliers to ensure high-quality production

How to Apply
